Bruno Bergamini do Nascimento

📍 Curitiba, PR | 📞 41 99593-3032 | 📧 bruno.bergamini@outlook.com | 🔗 LinkedIn

---

Summary

Full Stack Developer with over 3 years of experience in IoT solutions and public lighting telemanagement. Specialized in TypeScript and Java, focusing on scalable system architecture and IoT device integration. Proven technical leadership and process optimization skills.

Languages: Fluent English, with experience in technical communication.

Professional Experience

Exati Tecnologia
Mid-Level Systems Analyst II
Curitiba, Paraná - Remote
Nov 2024 – Present

- Technical leadership in optimizing features for public lighting telemanagement systems.
- Integration of IoT devices into city management systems, reducing communication failures by 40% using protocols like TALQ and IoT Hub.
- Automated customer ticket generation via Discord bots and YouTrack integration.
- Development of revenue estimation reports based on device programming, providing accurate insights for sales teams.
- Implementation of a device presentation system for commercial purposes, enhancing visualization for clients and partners.
- Creation of energy consumption monitoring modules, improving IoT device operational efficiency.
- Optimization of database queries and processes, reducing application response time.
- Collaboration with firmware teams to enhance device-server communication.
- Deployment of a controlled query processing system to prevent database overload.

Exati Tecnologia
Junior Systems Analyst III
Curitiba, Paraná - Remote
Nov 2023 – Nov 2024

- Participation in technical leadership training to improve software team coordination and agile project management skills.
- Development of the "Cidade Iluminada" mobile app for IoT device interaction using TypeScript and Quasar.js (front-end).
- Implementation of HTTP, BLE, and radio communication protocols for device-firmware integration.
- Use of Node-RED to orchestrate devices and sensors in public lighting telemanagement systems.

Exati Tecnologia
Fullstack Intern
Curitiba, Paraná - Remote
Oct 2021 – Nov 2023

- Development of remote lamp control and IoT device allocation features using TypeScript and Node.js.
- Creation of new ERP screens for telemanagement, improving interface usability.
- Design of a device allocation system for inventory control.
- Migration to a multi-tenant system architecture, enhancing flexibility and performance.

Education

Pontifical Catholic University of Paraná (PUC-PR)
Bachelor’s Degree in Information Systems
2019 – 2023

- Admitted via PROUNI scholarship program.
- Academic tutor for database and object-oriented programming courses.
- Member of a Unity 3D game development league with C# and VR support.

Relevant Projects

- Telemanagement App: Remote control of devices via HTTP/Bluetooth for public lighting systems.
- Cidade Iluminada: Mobile app for IoT device management in smart cities.
- Hack and Slice (VR): Unity-based VR game allowing 360-degree object slicing.
- Automatic Humidifier System: Arduino-based air humidity control system.

Programming Languages:

- TypeScript
- Java
- Python
- C++
- C#

Front-End Frameworks/Libraries:

- Vue.js
- React
- Quasar Framework
- Sass

Development Platforms & Tools:

- AWS
- Google Firebase
- Linux
- Docker
